

## INSTRUCTIONS FOR USE OF REK-O-KUT STYLUS FORCE GAUGE

1. Place the Stylus Force Gauge on the turntable platter, and position the stylus into the dimple of the raised section. The gauge should be approximately perpendicular to the phono pickup shown.

2. Select the desired tracking force within the recommendations for the pickup used. Place weights, which represent this tracking force, on the pan opposite the pickup stylus. Plastic weights of  $\frac{1}{4}$ ,  $\frac{1}{2}$ , 1, and 2 Grams are provided for this purpose. If a stylus force of greater than 5-3/4 Grams is required, a U.S. Penny will provide an accurate 2.5 gram weight. A U.S. Nickel will provide an accurate 5 gram weight.
3. Adjust the arm's counterweight till the balance arm of the Stylus Force Gauge is level, or swings evenly. The stylus tracking force of the arm is now set at the value of the weights chosen.
4. Your phono arm is now set up for proper tracking
