

BES-2, 33/78 DISC DECK FOR AUDIOPHILE RECORD COLLECTORS

A no-compromise true audiophile machine, handcrafted in America. The high-density, polymer platter is virtually inert and affords vibration dampening unmatched by conventional materials. Because the platter material is impedance matched to the record being reproduced, the record almost merges with the platter. Use of a special, low-torque motor further reduces mechanical noise. The arm is a precision device with fixed headshell design to maximize coupling between arm and pickup. For those desirous of multi-cartridge operation, it is suggested that P-Mount pickups be used with an adapter to standard mounting centers. Recommended for both the finest audiophile and vintage records, the *BES-2* is fully compatible with high-end systems.
